

Write 5 prompts for a hospitality task (system/user/context framing, few-shot, output schema). Submit prompt log + model outputs.

Prompt 1 – Hotel Room Booking

1. System Prompt

Identity

You are a hotel booking assistant.

Instructions

Your task is to process hotel room booking requests.

Extract the following information:

- Room Type
- Number of Guests
- Check-in Date
- Check-out Date
- Booking Status

Only process hotel booking requests.

If the customer asks anything unrelated to hotel bookings, politely reject the request.

2. User Prompt

I want to book a Deluxe room for 2 adults from 15 October to 18 October.

3. Context Framing

Hotel Information

Available Rooms:

- Standard
- Deluxe
- Suite

Maximum Guests:

Standard = 2

Deluxe = 3

Suite = 5

The hotel accepts bookings only if rooms are available.

4. Few-shot Examples

Example 1

Customer:

Book a Standard room for 1 adult tomorrow.

Assistant:

Room Type: Standard

Guests: 1

Check-in: Tomorrow

Check-out: Next Day

Booking Status: Confirmed

Example 2

Customer:

Reserve a Suite for 4 adults from Friday to Sunday.

Assistant:

Room Type: Suite

Guests: 4

Check-in: Friday

Check-out: Sunday

Booking Status: Confirmed

5. Output Schema

```
{
  "type": "object",
  "properties": {
    "room_type": {
      "type": "string",
      "enum": ["Standard", "Deluxe", "Suite"]
    },
    "guests": {
      "type": "integer"
    },
    "check_in": {
      "type": "string"
    },
    "check_out": {
      "type": "string"
    },
    "booking_status": {
      "type": "string",
      "enum": ["Confirmed", "Pending", "Rejected"]
    }
  },
  "required": [
    "room_type",
    "guests",
    "check_in",
    "check_out",
    "booking_status"
  ],
  "additionalProperties": false
}
```

6. Model Output

```
{
  "room_type": "Deluxe",
  "guests": 2,
  "check_in": "15 October",
  "check_out": "18 October",
  "booking_status": "Confirmed"
}
```

Prompt 2 – Airport Shuttle Booking

1. System Prompt

Identity

You are a hotel airport shuttle booking assistant.

Instructions

Your task is to process airport shuttle booking requests.

Extract the following information:

- Pickup Location
- Destination
- Number of Passengers
- Pickup Time
- Booking Status

Only process airport shuttle booking requests.

If the customer asks anything unrelated to airport shuttle bookings, politely reject the request.

2. User Prompt

Book an airport pickup for 3 guests at 10 AM.

3. Context Framing

Hotel Shuttle Information

Routes Available:

- Airport → Hotel

- Hotel → Airport

Maximum Passengers:

6 per shuttle

Operating Hours:

6:00 AM – 10:00 PM

Bookings are confirmed only if seats are available.

4. Few-shot Examples

Example 1

Pickup Location: Airport

Destination: Hotel

Passengers: 2

Pickup Time: 9:00 AM

Booking Status: Confirmed

Example 2

Pickup Location: Hotel

Destination: Airport

Passengers: 1

Pickup Time: 6:00 PM

Booking Status: Confirmed

5. Output Schema (JSON Schema)

```
SCHEMA = {  
  "type": "object",  
  "properties": {  
    "pickup_location": {  
      "type": "string"  
    },  
    "destination": {  
      "type": "string"  
    },  
    "passengers": {  
      "type": "integer"  
    },  
    "pickup_time": {  
      "type": "string"  
    },  
    "booking_status": {  
      "type": "string",  
      "enum": [  
        "Confirmed",  
        "Pending",  
        "Rejected"  
      ]  
    }  
  },  
  "required": [  
    "pickup_location",  
    "destination",  
    "passengers",  
    "pickup_time",  
    "booking_status"  
  ],  
  "additionalProperties": False}
```

6. Model Output

```
{  
  "pickup_location": "Airport",  
  "destination": "Hotel",  
  "passengers": 3,  
  "pickup_time": "10:00 AM",  
  "booking_status": "Confirmed"  
}
```

Prompt 3 – Hotel Spa Appointment Booking

1. System Prompt

Identity

You are a hotel spa appointment booking assistant.

Instructions

Your task is to process hotel spa appointment requests.

Extract the following information:

- Customer Name
- Spa Service
- Appointment Date
- Appointment Time
- Booking Status

Only process hotel spa appointment requests.

If the customer asks anything unrelated to spa appointments, politely reject the request.

2. User Prompt

Book a body massage for Emma on 20 November at 4:00 PM.

3. Context Framing

Spa Information

Available Services:

- Massage
- Facial
- Aromatherapy
- Body Scrub

Operating Hours:

Example 2

Customer:

Book a facial for Sarah tomorrow at 11 AM.

Assistant:

Customer Name: Sarah

Spa Service: Facial
Appointment Date: Tomorrow
Appointment Time: 11:00 AM
Booking Status: Confirmed

5. Output Schema

```
{
  "type": "object",
  "properties": {
    "customer_name": {
      "type": "string"
    },
    "spa_service": {
      "type": "string"
    },
    "appointment_date": {
      "type": "string"
    },
    "appointment_time": {
      "type": "string"
    },
    "booking_status": {
      "type": "string",
      "enum": [
        "Confirmed",
        "Pending",
        "Rejected"
      ]
    }
  },
  "required": [
    "customer_name",
    "spa_service",
    "appointment_date",
    "appointment_time",
    "booking_status"
  ],
  "additionalProperties": false
}
```

6. Model Output

```
{
  "customer_name": "Emma",
  "spa_service": "Massage",
  "appointment_date": "20 November",
  "appointment_time": "4:00 PM",
  "booking_status": "Confirmed"
}
```

Prompt 4 – Hotel Laundry Service Request

1. System Prompt

Identity

You are a hotel laundry service assistant.

Instructions

Your task is to process hotel laundry service requests.

Extract the following information:

- Room Number
- Laundry Items
- Service Type

- Request Status

Only process hotel laundry service requests.

If the customer asks anything unrelated to laundry services, politely reject the request.

2. User Prompt

Dry clean two jackets from Room 510.

3. Context Framing

Laundry Service Information

Available Services:

- Wash

- Iron

- Dry Clean

Operating Hours:

5. Output Schema

```
{
  "type": "object",
  "properties": {
    "room_number": {
      "type": "string"
    },
    "laundry_items": {
      "type": "string"
    },
    "service_type": {
      "type": "string",
      "enum": [
        "Wash",
        "Iron",
        "Dry Clean"
      ]
    },
    "request_status": {
      "type": "string",
      "enum": [
```

```

    "Accepted",
    "Pending",
    "Rejected"
  ]
},
"required": [
  "room_number",
  "laundry_items",
  "service_type",
  "request_status"
],
"additionalProperties": false
}

```

6. Model Output

```

{
  "room_number": "510",
  "laundry_items": "2 Jackets",
  "service_type": "Dry Clean",
  "request_status": "Accepted"
}

```

Prompt 5 – Hotel Banquet / Conference Hall Booking

1. System Prompt

Identity

You are a hotel banquet and conference hall booking assistant.

Instructions

Your task is to process banquet and conference hall booking requests.

Extract the following information:

- Event Type
- Number of Guests
- Booking Date
- Hall Type
- Booking Status

Only process banquet or conference hall booking requests.

If the customer asks anything unrelated to hall bookings, politely reject the request.

2. User Prompt

Booking Status: Confirmed

5. Output Schema

```
{
  "type": "object",
  "properties": {
    "event_type": {
      "type": "string"
    },
    "guests": {
      "type": "integer"
    },
    "booking_date": {
      "type": "string"
    },
    "hall_type": {
      "type": "string",
      "enum": [
        "Banquet Hall",
        "Conference Hall"
      ]
    },
    "booking_status": {
      "type": "string",
      "enum": [
        "Confirmed",
        "Pending",
        "Rejected"
      ]
    }
  },
  "required": [
    "event_type",
    "guests",
    "booking_date",
    "hall_type",
    "Booking_status"
  ]
}
```

```
],  
  "additionalProperties": false  
}
```

6. Model Output

```
{  
  "event_type": "Business Meeting",  
  "guests": 60,  
  "booking_date": "18 November",  
  "hall_type": "Conference Hall",
